

Jazzmin Sicat-Cabizares

AI Automation Engineer & Backend Developer

jazzmincabizares@gmail.com · +63 938 903 6717 (WhatsApp) · Cavite, Philippines

buildwithjazz.com · github.com/CabzuJaz · linkedin.com/in/jazzmin-sicat-cabizares-9346041b8

Open to full-time remote roles with US and international teams. Flexible hours, mornings preferred (Philippine time, UTC+8).

SUMMARY

AI automation engineer with 3+ years in software engineering and automation, including 1+ year building AI systems. Designs and ships multi-agent pipelines, Claude tool-use integrations, n8n workflows, and Python, C#, and SQL backends, and builds in the parts that keep them reliable: idempotent retries, duplicate handling, audit trails, and human approval gates.

EXPERIENCE

AI Automation Engineer · Build with Jazz (Freelance)

2025 – Present

- Built and delivered a five-workflow n8n lead pipeline for a US home-services company: three WordPress intake paths normalized to one field contract, duplicate matching before any CRM write, GorillaDesk and Google Sheets sync, and rules-based estimating that routes ambiguous jobs to manual review.
- Added staff SMS and email alerts with an acknowledgement reminder loop, consent and opt-out handling for A2P SMS compliance, and an append-only audit trail for estimate overrides that syncs idempotently back to the CRM.
- Integrate GoHighLevel CRM through its workflows and API for lead capture, contract generation, and client project dashboards; build n8n pipelines for client onboarding, payment tracking, and multi-channel notifications.
- Built this portfolio's AI assistant (Next.js, Vercel AI SDK, Claude): streamed tool-calling chat that renders project and résumé cards, scopes automation requests, and generates contract PDFs delivered through the GoHighLevel API.

Junior Software Engineer · Xytron Int. Inc.

2023 – 2025

- Cut manual processing time by 60% by building internal automation tools for database integration (SQL, MS Access, SQLite), print automation, and system workflows.
- Built and maintained C#/.NET desktop applications for secure banking document processing, processing bank statements of account with 100% accuracy.
- Automated high-volume document generation: populated Word and PDF templates and wrote print programs in PReS for Nipson high-speed printing systems.
- Built CSV, Excel, and SQL import/export and reporting workflows for structured data.

Kitchen Team Leader, Seven-Eleven Corp. (2021 – 2023). Led team operations: staffing, payroll, supply forecasting, and monthly reporting.

IT Admin Intern, Greenergy Inc. (2022). Network setup, hardware support, PC configuration, and invoice processing.

SELECTED PROJECTS

AI Content Operations System Python · SQLite · Codex CLI · Discord API · GoHighLevel API · OpenAI Images API

- Released v1.0.0 of a Python content operations platform (full CLI plus a local operator UI) that moves a strategy and topic bank through scoped AI copy and visual roles, human approval, and scheduled Facebook and Instagram publishing via GoHighLevel.
- Kept deterministic code in charge of state and side effects: AI roles work behind strict schemas, and drafts and media are immutable, SHA-256-verified versions, so a narrow revision can't silently change approved work.
- Made remote publishing idempotent and recoverable: live-verified scheduling with read-back and cleanup, integrity checks, and a tested backup and restore path, covered with pytest.

STR Lead Research Agent Python · Claude API · Flask · SQLite · SSE · Google Sheets API

- Capstone of a self-directed 30-day Claude sprint: orchestrator, search, and enrichment agents coordinated through Claude tool use, at about \$0.007 per run on Claude Haiku.
- Enrichment pulls emails, phones, and social links with four fallback strategies (mailto/tel links, regex, HTML-entity decoding, contact-page fallback), dedupes into SQLite, and syncs to Google Sheets.
- Flask front end streams every agent step live over Server-Sent Events, with input sanitization and XSS protection.

Multi-Agent Orchestrator Pipeline Claude API · Tool Use · SSE · FastMCP · Python · SQLite

- Orchestrator agent breaks tasks into subtasks and delegates them to specialized sub-agents with tool use, writing structured output to Google Sheets and SQLite.
- Summarizes between agents to stop token bloat across multi-step runs, and caps every tool-use loop at three iterations to bound API cost.

Also built: AI Email Triage System · MCP Server + SQLite Integration · AI Lead Qualification & Follow-Up Automation

SKILLS

AI & Automation	Claude API, Codex CLI, Prompt Engineering, Human-in-the-Loop AI, n8n, GoHighLevel (GHL), MCP, FastMCP, GHL Workflows, GHL API, Multi-Agent Systems, Tool Use, SSE, RAG
Programming	Python, C#, VB.NET, JavaScript, SQL, HTML/CSS
APIs & Integrations	Google Sheets API, Google Drive API, Microsoft Graph API, Anthropic API, REST APIs, OpenAI Images API, Discord API, GorillaDesk CRM, Twilio SMS, Gmail API, Google Maps / Geocoding, Webhooks
Backend & Data	Flask, SQLite, State Machines, Immutable Versioning, MS Access, Web Scraping, Regex, CSV Processing
Tools	Git, GitHub, pytest, Google Workspace, MS Office, WordPress, WPForms

EDUCATION

Bachelor of Science in Computer Engineering, Cavite State University (2018 – 2023)

CERTIFICATIONS & LEARNING

- **Make.com**, Make (2026)
- **Zapier**, Tara AI Community (2026)
- **30-Day Claude AI Engineering Sprint** (2026). Self-directed: 30 AI projects in 30 days covering Claude API tool use, MCP servers, multi-agent pipelines, and n8n integrations.
